Summary

Artificial Intelligence and Machine Learning student with strong foundation in predictive modeling, data preprocessing, and model evaluation. Proficient in Python, Scikit-learn, and Tableau, with hands-on project experience in NLP and computer vision. Eager to apply ML skills to solve complex problems and deliver data-driven solutions.

Education

Acharya Institute of Technology, Bengaluru, IN — 2022–2026
B.E. in Artificial Intelligence and Machine Learning

Athani Composite Pre-University College, Davangere, IN — 2020–2022
PU in PCMB

Akshara Residential School, Shikaripur, IN — 2020
ICSE

Projects

Student Performance Analysis using ML

- Engineered a predictive system to identify at-risk students, achieving 90% prediction accuracy using Random Forest and SVM algorithms.
- Executed end-to-end data workflow, including preprocessing, feature engineering, and model evaluation on a Kaggle dataset with 1000 student records.
- Delivered actionable, data-driven insights to support academic interventions, demonstrating the potential of AI to improve educational outcomes.

Organ Donation Matching System

- Developed a predictive donor-recipient matching model using SVM and Random Forest to enhance compatibility prediction accuracy by 85% compared to baseline methods.
- Implemented robust evaluation metrics to validate the system's reliability and ensure fair and accurate matching.

NLP-Based Sentiment Analysis

- Built an NLP workflow for multi-class emotion detection from text, achieving 89% precision using a transformer-based architecture.
- Implemented advanced text processing techniques, including tokenization and lemmatization, and fine-tuned the model to significantly improve classification accuracy.

Emotionally Intelligent Blockchain Security in IoT (Ongoing)

- Designing and developing a novel hybrid framework integrating a CNN-based facial emotion recognition model with IoT intrusion detection systems.
- Applying blockchain technology to create a tamper-proof ledger for IoT device interactions, ensuring data integrity and transparency.

Technical Skills

Languages: Python, MySQL, MongoDB (Basic)
ML/Data Science: Machine Learning, Generative AI
Data Visualization: Tableau, Power BI

Certifications

Machine Learning Specialization (Coursera), GenAI for Everyone (Coursera), Python for Everybody Specialization (Coursera)

Soft Skills

Team Collaboration, Problem Solving, Creativity, Project Coordination, Time Management, Leadership, Multitasking

Languages

English, Kannada, Hindi
